

The original study plan for the Thesis is given below. This plan shows the schedule from the start of the Thesis, until the Green-light Review. The Kick-off meeting was on the 5th of February 2024 and the original plan was to try and finish the thesis in about 32-34 weeks. This was well within the limit set by the 80% FTE thesis schedule.

Due to delays with the approval of the experiment by the HREC, it is assumed that the experiment implementation phase will need to be extended by two weeks. The delay in the experiment approval was caused by an issue with the HREC's system and was totally out of my control. Despite this, the Thesis can still be finished by the end of September or the start of October; either way, it will finish well before the final deadline of 25th November 2024 as per the Kickoff form.
